SAFGRAD PROGRAM ASSESSMENT

ACTION PLAN FOR THE COLLECTION AND ANALYSIS OF DATA

Introduction.

This Action Plan consists of a description of the procedures to be followed in collecting the data needed for the assessment, specifying also the table formats, their corresponding completion instructions and the materials developed in preparation for undertaking an in-depth study of a sample of SAFGRAD countries.

The following are the specific components of the Action Plan:

- 1. Copy of the Work Program for the Assessment, which provides an overall framework for the mission, indicating the activities, outputs, responsible entities and target dates;
- 2. Copies of the notifications sent to the National Research Directors and to the Network coordinators concerning the Assessment and the planned visits to sample countries;
- 3. Description of the methodology followed in the selection of countries for in-depth study, including the criteria matrix used and the resulting country scores by network;
- 4. The Data Collection Travel Plan for the Assessment Team, specifying the countries and networks to be visited, as well as the scheduling of the work;
- 5. The program of specific activities to be carried out by the Assessment Team in Mali, which is to be replicated in the other sample countries;
- 6. A set of tables and guides for the collection of data on germplasm flow and bio-agronomic experiments conducted by the network scientists;
- 7. A set of Economic table formats intended to measure the impact of research activities.

WORK PROGRAM

SAFGRAD PROGRAM ASSESSMENT OF REGIONAL RESEARCH NETWORKS

ACTIVITY	OUTPUTS	RESPONSIBLE	DA	ATES
			STARTING	COMPLETION
 Collect, review and synthesize available data and findings pertaining to the performance and contri— bution of regioinal agricul— tural research networks. 	 1. a) Report specifying the status of regional agricul—tural research; b) Indication of additional data needed to effect the assessment. 	Network Coordinators and Assessment Team	9 May 1992	15 July 1992
Prepare an Action Plan for the collection and analysis of the data needed for the assessment	 Action Plan specifying: data sets; formats; resources needed for collecting the data; timing; and procedures. 	Assesment Team	15 June 1992	10 July 1992
 Collection of the data specified in the Action Plan for all of the networks, in a representative sample of countries. 	 a) Network Reports on their performance and impact; b) Oversight Committee, Reports on NARS manage – ment and leadership issues; c) Assessement Teams' Trip Reports. 	Network Coordinators, Steering Committee, Oversight Committee and Assessment Team.	13 July 1992	14 Sept. 1992
 Analysis of collected data and elaboration of Draft Report. 	Draft Program Assessment Report.	Assessment Team	23 Aug. 1992	23 Oct. 1992
5. Review of Draft Report.	5. Comments on the Draft Report.	AID/SAFGRAD Project Committee Assessment Team.	23 Oct. 1992	30 Oct. 1992
6. Meeting to review the findings of the Assessment Team	6. Proceedings of the review meeting, involving all actors.	AID Project Committee, USAID/Burkina Faso, SAFGRAD and Assessment Team	2 Nov. 1992	3 Nov. 1992
7. Preparation of Final Report	7. Final Report	Assessment Team	4 Nov. 1992	24 Nov. 1992

SAFGRAD PROGRAM ASSESSMENT

METHODOLOGY FOR SELECTING COUNTRIES FOR IN-DEPTH STUDY

A. General Considerations

According to the Terms of Reference for this Program Assessment, an in-depth study should be undertaken of a number of SAFGRAD countries, in order to ascertain and analyze the performance of four commodity research systems and their impact on agricultural development.

Given the paucity of time and funding for the Assessment, only a reduced sample of the 26 SAFGRAD countries could be studied in detail, which implied that a selection procedure had to be designed and implemented, in order to ensure accounting for the full range of existing situations with respect to research performance and impact. Hence, the overriding consideration in the design of the selection methodology, was to provide for representativity and validity, so that the findings pertaining to the sample would be applicable to the full universe of SAFGRAD countries.

B. Stepwise Selection Procedures

The first step in the identification of the countries for in-depth study took place before the initiation of the Program Assessment itaself (before 9 May 1992), and consisted of the selection of the 16 countries listed in the Terms of Reference, which were representative of the four commodity networks across all SAFGRAD regions. This initial selection was carried out by the SAFGRAD Coordination Office (SCO)—in consultation with the respective Steering Committees and Network Coordinators—based on the overall familiarity with the prevailing situation throughout SAFGRAD, without specifiying the criteria used in the selection.

The second step in the selection of countries for detailed study, took place during the initial stages of the Program Assessment, as part of the preparation of the Action Plan for data collection and analysis. Basically, this step consisted of: 1) the identification of four basic sets of selection criteria; 2) the valuation of the 16 pre-selected countries within networks, according to the criteria; 3) the ordering and ranking of all countries across networks; and 4) the selection of the eight highest-ranked countries to be studied, given the availability of only eight weeks to collect the needed data.

The selection criteria used, which are presented in Table 1, were the following:

a) Constraints/Ecology, which refer to the areas of concern of the research endeavors and their corresponding ecological manifestations. Each country was assigned a check (of equal value), if it was engaged in agricultural research with respect to the following types of constraints: i) droght/

weather; ii) infertility/soils; iii) Striga; iv) other pests and diseases; and v) agronomic practices;

- b) Major SAFGRAD Zones, which refer to the geographical areas under the mandate of SAFGRAD, comprising: i) the Sahel; ii) the Sudan Savanna; and iii) the North Guinea Savanna. A score of one was given to each country conducting research in any of these zones;
- c) Performance/Resources, which generally categorize the countries by their relative research performance and corresponding resource endowment, thus: i) above par; ii) at par; and iii) below par. These criteria are designed to identify the various levels of institutional development;
 - d) Availability of Basic Economic Data, which identifies the countries most likely to possess good time-series data, indicative of the economic impact of research endeavors.

The valuation, ordering and ranking of all 16 countries across networks is summarized in Table 2, which shows that the nine highest-ranked countries, respectively, are: Burkina Faso; Mali; Cameroon; Togo; Ghana; Ethiopia; Kenya; Niger; and Nigeria. The latter list was reduced to the required eight countries, by eliminating Togo, due to the prevailing security situation in the study area when the selection was effected.

SAFGRAD PROGRAMME ASSESSMENT DATA COLLECTION PLAN IN MALI.

TIME	- PERIOD	TYPE OF DATA TO COLLECT	RESPONSIBLE TEAM MEMBER	INSTITUTIONS TO VISIT
DATE	HOUR			The state of the s
SUMDAY AUGUST 9	16:3 0 -17:30	Organizational meeting with WECASORN Coordinator	Assessment Team and Networks Coordinators	At ICRISAT Heaquarters or at Hotel.
MONDAY AUGUST 10	08:30-10:00	i) Institutional change. ii) Impact of research on agricultural production and productivity. iii) Assessment of the potential of Lead MARS to manage networks.	Assessment Team and Network Coordinators.	i) Director General IER. ii) Research Director and Chairman of WECASORN.
MONDAY AUGUST 10	10:00-14:00	 i) Germplasm flow, agronomy, entomology etc. experiments. 	Schroeder, Muleba, Thomas and Apraku.	Sotuba Station, ICRISAT.
		ii) On-farm trials and economic data.	Scott and Taye.	FSR Department, IER and USAIO Economists, Multi-location Irials Unit etc.
TUESDAY AUGUST 11	08:30-14:00	i) Completion of Tables 8, 9 and 10	Muleba, Thomas and Apraku.	Extension services, seed multiplication
		ii) Collection of data on use of technology production and productivity.	Scott, Taye and Schroeder.	agencies, CNOT, World Bank Agr. Extension Project Activities. To discuss with key economists and statistician.
WEDNESDAY AUGUST 12	08:30-14:00	 Sorghum, maize, millet and cowpea production and marketing data. 	Scott, Muleba, Thomas and Badu-Apraku.	IER Economic and Statistic Unit and of Minist. of Agr., planning and economic Unit
		 ii) MARS scientific and research management leadership (interview of researchers and managers). 	Taye and Schroeder.	IER, Sotuba Station etc.
THURSDAY AUGUST 13	09:00-11:00	 i) Research Coordination, linkages, statistics, population and micro-eco- nomic data on the Sahelian countries. 	Taye and Scott.	Institute of Sahel.
		ii) Assistance to complete technical format.	Schroeder, Muleba, Thomas and Apraku.	Sotuba Station.

LIST OF ECONOMIC TABLES

- EC 1. Production Data for Improved SAFGRAD and Other Crop Varieties.
- EC 2. Basic Production Data for Cattle. Sheep and Goats.
- EC 3. Average Expenditures on Production Inputs, for SAFGRAD Improved and Other Crop Varieties.
- EC 4. Disposal of Crop Production by Destination, for SAFGRAD Improved and Other Crop Varieties.
- EC 5. Production, Imports and Exports of Selected Crops.
- EC 6. Production, Imports and Exports of Beef, Mutton and Goat Meat.
- EC 7. Selected Sectorial and National Macroeconomic Indicators.
- EC 8. Research Cost Structure of Main Network Entities.
- EC 9. Budgetary Allocations to National Research Activities.

SAFGRAD PROGRAMME ASSESSMENT

GUIDE FOR THE COLLECTION AND TRANSMITTAL OF THE ASSESSMENT DATA.

The tables and other formats, as well as the procedures for the collection and analysis of the information needed for the SAFGRAD Programme Assessment, were developed by the Assessment Team assembled by AID for this purpose, in collaboration and with the concurrence of: a) the Steering Committees of the four commodity networks; b) the representatives of the IITA and ICRISAT research centres; c) the Network Coordinators and d) the SAFGRAD Coordination Office (SCO). In turn, the Assessment Team consisted of: the SAFGRAD Research Director; a Senior Agricultural Economist, and a USAID Research Analyst.

- 1. The basic unit of data collection will be the NARS Scientists, who thus constitute the respondents. Each table has a space for the scientist's (respondent's) name.
- 2. Data collection forms will be sent to one NARS contact person for each crop in each country, who will be responsible for their distribution and retrieval when completed. The contact person would normally be the country coordinator.
- 3. The NARS contact person will then send the forms to all of the scientists in the country that are engaged in research on the commodity in question. The contact person may also fill a set of forms.
- 4. As soon as possible after receiving the forms from the contact person, the respondent will be visited by the contact person and by the Assessment Team.
- 5. The respondent should forward the completed forms back to the contact person by August 15, 1992.
- 6. The contact person will in turn send the forms back to the Network Coordinator who would be responsible for forwarding them to the Assessment Team for complilation and analysis.
- 7. All experiments that have been completed on the crop should be included in the data collection forms, whether supported by SAFGRAD or not.
- 8. Only the experiments on which the respondent worked or for which he or she had responsibility, should be reported. The non-applicable tables should be left blank.
- 9. When the information requested is not directly obtainable by the respondent (such as on-farm trials or seed multiplication and distribution), as when the activities are carried out by other units or institutions, the respondent should either collect the information through his/her contacts elsewhere, or inform the Contact Person immediately, in order to ensure follow-up and completion of the forms.

Tél. 50-30-60-71 / 50-31-15-98

Portona Faso

- 10. There are 10 tables. a) the first 4 track the flow of germplasm from all sources, indicating its destination for each stage of development, right up to on-farm demonstrations; b) tables 5 and 6 track all other experiments, including agronomy, entomology, pathology, post harvest, etc. both on-station and onfarm, respectively; c)tables 7 and 8 track yield increases of the best potential variety per year in advanced and on-farm yield trials, respectively; d)table 9 tracks technologies, varieties, and packages released to farmers; and e) table 10 tracks seed multiplication and distribution.
- 11. Respondents may need to send Tables 6, 8 and 9 to an on-farm unit or farming systems unit, and Table 10 to a seed multiplication unit, or to NGOs involved in this activity.
- 12. The completion of some of the tables may require some time to look into backlog of research records, field data books, and National Annual or Biannual Commodity Research Progress Reports. The data requested will be essential for justifying future donor support to Agricultural Research in sub-Saharan Africa.
- 13. The earliest year for which data should be provided will depend on the initiation of each country's national programme. Some national programmes did not begin until the mid 1980s, while others have been in existance since the 1970s. In any event, data collection for the SAFGRAD Programme Assessment should date back to 1982, whenever possible, given that the period of reference of the exercise is 1982-1992.

July 20, 1992.

July 8, 1992

Dear Sir,

Subject: IMPACT ASSESSMENT STUDY OF SAFGRAD NETWORKS

As you know, funding of agricultural research has come under critical scrutiny both by national governments and donors. There is general concern as to whether previous investments in research have improved agricultural productivity and production.

The purpose of this letter is to brief you on the impact assessment study on SAFGRAD Networks, which is currently in progress. Some principal objectives of the study are:

- i) To quantify the contribution of agricultural research (in a few countries) to economic growth and development.
- ii) To determine the effectiveness of networks in enhancing scientific and research management leadership.
- that the application of technologies has induced in food grain production and productivity which consequently could improve farmers' incomes.

.../2

TB/JMM/ky

Coordination Office / Bureau de Coordination SAFGRAD 01 B.P. 1783, Ouagadougou 01 Burkina Faso

Tél.: 30.60.71/31.15.98 Fax 31 15 86 - Télex: 5381 BF To determine the efficiency and performance of national agricultural research systems (in selected countries) in the generation, diffusion and adaptation of agricultural technologies.

The study is based on the findings of the SAFGRAD II evaluation which has identified a number of positive indicators of project achievement. The study would look in greater depth at:

- A few carefully selected network activities of critical importance.
- ii) Changes taking place as a result of networking activities.
- iii) The impact on productivity, production and income resulting from the use of technologies.

In consultation with the respective network Steering Committees, a few countries suitable for the impact study were identified.

The assessment study was perceived on the premises that several institutions of research (NARS, IARCs, Networks, etc) extension services, farmers, government and non-government agencies are involved in bringing about technological changes to enhance agricultural production. The study would therefore involve the cooperative efforts of national programmes. At field level, collection of data would be carried out between July and the end of September 1992.

Enclosed with this letter, please find a document that describes the purpose and activities of the impact assessment study.

We look forward to your kind technical cooperation and logistic support in order to facilitate the above impact assessment study on agricultural research.

With best regards.

WOLLY Sincerely,

BOLLY OF MENYONGA
